

ANGELMAN SYNDROME FOUNDATION

ONE STEP CLOSER

Angelman Syndrome (AS) is a rare neuro-genetic syndrome that impacts 1/20,000 births globally. Individuals with AS have significant gross and fine motor delays, speech impairment with little to no use of words, seizures, hyperactive behaviors, and happy demeanor.

The Difference Your Donations Make

Contributions raised from the walk-a-thon, occurring in 24 cities, help the AS Foundation to fund science & clinical research to advance the knowledge, cause, treatment and eventual cure of AS.

Awareness

Awareness provides comfort and understanding for families faced with a diagnosis, and for the general public who have questions they're afraid to ask.

Research

Without awareness, there is limited interest in research. Without research, little is known to educate, treat, and potentially cure those faced with AS.

Education

Knowledge and understanding of AS characteristics leads to more impactful services from the medical, educational, and funding community; resulting in healthier, higher functioning individuals.

Angelman Syndrome Foundation

Rare syndrome families unite and bring national walk to Cincinnati
